

Bonovo Took Part in the Eleventh COA

The Eleventh Chinese Orthopedics Association (2016 COA) was held in Chinese National Conference Center in Beijing from November 18th to 20th in 2016. Bonovo came back to this annual feast for orthopedics after skipping the last year's event. We had a brand new exhibition booth at the main exhibition hall. Not only did we have the innovative exhibition booth, but also showed the latest domestic products such as anterior cervical plate, cervical & lumbar fusion cages and a full spine product line as well as the implants and radio frequency products in which we cooperate with overseas manufactures. We also had a satellite symposium on 19th with the topic concentrating on BacFuse interspinous fixation. Experts in the field were invited both home and abroad, thus drawing the attention of lots of surgeons and distributors. The conference concluded to a wonderful ending on 20th. We had a huge success with the coordination of different departments in Bonovo. What is more, the success would make us firmly believe that in the upcoming year we will have an even better development and growth.
