

Bonovo Took Part in 2017 CAOS

The 10th Chinese Association of Orthopedic Surgeons was held on 12th May, 2017 in Guangzhou. Bonovo took part in the exhibition and had the brand-new O-Fuse, which is an OLIF device implanted through the Kimbin trangle under transforaminal endoscopic approach. Minimal invasive products of Elliquence were also exhibited. O-Fuse was innovated by Bonovo R & D team based on clinical application. It is the first OLIF device cleared by CFDA in the category in China , which adopts new approach tool and completes the surgery based on intervertebral foramen endoscope as well as percutaneous pedicle screw fixation, bringing absolute minimal invasive treatment for patients. Attendees showed great interest in O-Fuse.
