

Bonovo's presence at 7th International Forum of Minimally Invasive Spine Surgery Shanghai

After entering the new century, new theories and techniques are thriving about minimally invasive spine surgery and are becoming the top concern in the field of spine surgery. To provide a high-end communication platform for minimally invasive spine surgery and promote the knowledge of relevant technical development among experts both domestic and overseas, the 7th International Forum of Minimally Invasive Spine Surgery was held in Ruijin Hospital affiliated to Shanghai Jiaotong University on 15th and 16th October, 2016.

Bonovo sponsored and took part in exhibition of this forum. Products were highly valued among the attendees, especially CrossFuse that is used in the treatment of degenerative scoliosis among adults.

Dr. Jake Timothy from Leeds, UK delivered a speech entitled in Treatment of Degenerative Scoliosis using DLIF technique and talked about the advantages of DLIF including anterior longitudinal ligament release, corrects coronal imbalance, Indirect decompression of neural foramina, more area for bone graft, can be done via MIS and use of lordotic cages can restore sagittal balance. What's more, transparent retractor is of vital importance and necessity in surgeries. Plus, Dr. Timothy emphasized that the advantages of CrossFuse are obvious as follows. It's easy to implant, more compatibility, larger bone graft area and more transparent. Last but not least, combined lateral release and posterior fixation is having improved outcomes with fewer complications.

The forum concluded successfully on 16th, October in the afternoon. Yong Song (Bonovo's CEO), Yang Ning, VP of Sales and marketing, Pheonie Yang (Regional Sales Manager), Catherine Liu (Marketing Specialist) took part in this forum.
